**ON-LINE FIG 1.** Examples of the Archer classification of maxillary third molar impaction considering the angulation with the second molar: mesioangular (*A*), distoangular (*B*), horizontal (*C*), vertical (*D*), inverted (*E*), and buccoangular (*F*). (Reproduced with permission from Medical Illustrations Rodrigo Tonan.)

ON-LINE FIG 2. Examples of the Winter classification of mandibular third molar impaction considering the angulation with the second molar: mesioangular (*A*), disastoangular (*B*), horizontal (*C*), vertical (*D*), inverted (*E*), and transverse (*F*). (Reproduced with permission from Medical Illustrations Rodrigo Tonan.)

ON-LINE FIG 3. Ameloblastoma. Coronal T2-weighted (*A*) and axial contrast-enhanced T1-weighted (*B*) MR images show an expansile lesion with cystic and solid components in the left mandibular angle (*arrows*), superiorly displacing the third molar (*arrowhead*). (Courtesy of Dr. Henry Knipe, Radiopaedia.org; rID:53230, https://radiopaedia.org/*cases*/ameloblastoma-22).
